	2.1.1 some subsection	4
3	Another chapter	5
	3.1 testsection	5
4	Last chapter	6
	4.1 testsection	6
A	Some Appendix	7

Chapter 1

Introduction

This paper only describes how to use the project-window and the settings.

Actually it is quite simple. Just use the project like in other applications: add, remove etc.

- By double-clicking on a file it will open.
- By double-clicking on an entry of the 'Table of Contents' the file will open at that specific position.

The 'Table of Contents' contains

```
\chapter \section \subsection \subsubsection
```

$$\sqrt{\frac{1}{2+x}}$$

Chapter 2

Some chapter

2.1 some section

2.1.1 some subsection

What is WinShell ?

WinShell ist a graphical user interface for easy working with TeX. It is NOT a TeX-System. You need an additional TeX-package for DOS/Windows:

`ftp://ftp.dante.de/pub/tex/systems/msdos/` or
`ftp://ftp.dante.de/pub/tex/systems/win32/` (recommended)

happy teXing...

Chapter 3

Another chapter

3.1 testsection

If you have equal named sections in different files than both files are opened at the specific position on double-clicking.

Chapter 4

Last chapter

4.1 testsection

If you have equal named sections in different files than both files are opened at the specific position on double-clicking.

Appendix A

Some Appendix

nothing special to say here...
